Summary

Software Engineer bridging data science and backend development, skilled in Python, SQL, FastAPI, Node.js, and SAP CAP, with a focus on turning models into scalable, production-ready systems.

Skills

Programming & Querying: Python, SQL, C++, JavaScript

Technologies: TensorFlow, Pandas, scikit-learn, FastAPI, Flask, REST APIs, Node.js, Postman, Streamlit, SAP CAP, SAP HANA Cloud, React.js, Git, GitHub

Concepts: Machine Learning, Deep Learning, Generative AI, Time Series Forecasting, Exploratory Data Analysis (EDA), Transfer Learning, Feature Engineering, Object-oriented programming

Experience

Software Engineer - Trainee

Jul 2026 – Present

Accenture (Remote)

- Developing a **Retail Omni-Channel Loyalty & Rewards application**, designing relational data models for customers, transactions, products, rewards, and redemptions.
- Implementing backend business logic, data validation, points calculation, loyalty tiers, and reward redemption using SAP CAP and Node.js.
- Built a **product recommendation pipeline using SAP HANA PAL and association-rule mining**, processing **120K+ transaction-item records** across **8K+ products**, generating **500+ association rules** with **75%+ confidence**.

Data Science Intern

Jan 2026 – Jul 2026

DAAKit Technologies Pvt. Ltd. (Onsite)

- **Developed a multi-client demand forecasting system** using two-stage LightGBM with lag, rolling, intermittent-demand and hierarchical features across **4.1M+ source rows** and **584K+ target-domain rows**.
- Applied transfer learning and client personalization, **reducing test WAPE by 26%** ($0.647 \rightarrow 0.478$) against the naive baseline.
- **Designed a multi-tier HLD/SDD/NDD SLA engine** covering **177 pincodes**, modeling **59.32% peak HLD coverage** and reducing modeled fleet requirements by **67%**.
- **Integrated an end-to-end KYC API** with Surepass OCR/verification and DigiLocker, optimizing rule-based screening, document validation and exception handling to maintain an **85%+ automated approval rate** for low-risk cases.

Projects

DevSignal - ML Aware Activity Analyzer | Python, Watchdog, Git, SQLite, Ollama

[Project Link](#)

- Created a local-first pipeline capturing real-time file changes and Git diffs, with event deduplication, ML aware classification, tagging, and session tracking to filter high-frequency file-save noise.
- Designed a hybrid rule-based and local Ollama summarization layer, exporting structured development events as LLM-ready JSON and human-readable Markdown timelines.

Multimodal AI Mental Health Assistant | Python, TensorFlow, OpenCV, Librosa, Streamlit

[Project Link](#)

- Built an AI-based system that analyzes voice tone, facial expressions, and text sentiment to assess mental health indicators.
- Fused multimodal signals using TensorFlow across **7,356 RAVDESS recordings** and **35,887 FER-2013 facial-expression images** for emotion recognition.

Awards & Certifications

- **Oracle Cloud Infrastructure Data Science Professional – 2025:** Professional certification in cloud-based data science, machine learning, and AI workflows on Oracle Cloud Infrastructure. ([Link](#))

Education

B.Tech Computer Engineering (Specialization in Data Science)

Sep 2022 – Jun 2026

J.C. Bose University, YMCA Faridabad, Haryana

CGPA: 7.9 / 10
